

HIP RETRACTORS

Our **Hip Retractors** are designed for the use in various surgical exposures to the hip, including minimally invasive approaches.

Typical Hohmann-type blade ends are combined with unique handle shapes for improved visualization and easy wound access. Each retractor thickness is optimized for ease of placement, visualization and stability.

The Hip Retractors feature typical Hohmann-type blade ends with bend angles which remove handles from wound site for improved visualization. The retractors optimized thickness helps wound integrity and stability.
