Woburn, MA (May 30, 2024) – Tecomet Inc., a leading contract manufacturer of orthopedic implants, instruments, and sterilization trays, announced today that it has been recognized by Newsweek as one of America's Greatest Workplaces for Mental Wellbeing 2024. Newsweek partnered with data researcher Plant-A Insights Group to compile the inaugural ranking, which lists the top 750 U.S. employers making a positive difference in the mental wellness of their workers.

"We are very pleased to receive this award in recognition of our efforts to foster a supportive and nurturing workplace and to champion the emotional well-being of our employees. Our team members are at the heart of our culture, and we know that mental wellness is critical to overall health, reduced stress and higher productivity and retention. We will continue to focus on providing all our employees with the resources they need to thrive here," said Jenifer Zbiegien, Chief Human Resource Officer of Tecomet.

"Mental well-being is an increasingly important concern for U.S. workers—which means it's increasingly important for U.S. employers as well," said Newsweek Global Editor in Chief Nancy Cooper. "To spotlight the organizations prioritizing the mental well-being of their employees, *Newsweek* has partnered with data researcher Plant-A for the inaugural ranking of America's Greatest Workplaces for Mental Well-Being, highlighting companies making a positive difference in the mental wellness of their workers."

Selections were based on publicly available data, input from HR professionals, and more than 1.5 million company reviews from over 250,000 confidential online surveys of U.S. workers.

About Tecomet

Headquartered in Woburn, Massachusetts, with over 16 facilities worldwide across 3 continents and 5 countries, Tecomet is a global leader in the design, development, and manufacture of orthopedic, robotic assisted, and minimally invasive surgical products. Tecomet provides a full range of metal and material conversion technologies, for long-term implants and instrument solutions, including forging, casting, precision-machining, and other value-add services. Tecomet is also a leading manufacturer of precision components to the aerospace & defense industry, producing products used in aircraft engines, missile & satellite propulsion systems, vision systems, and infrared applications. Tecomet meets the requirements of ISO 9001, AS9100, ITAR, ISO 13485, and for decades has been a steadfast partner of quality to its customers.
